

CLIENT

PFIZER

LOCATION:

Vaccine Warehouse
Pearl River, NY

76,000 SF VACCINE WAREHOUSE

PROJECT DESCRIPTION

Pfizer was experiencing temperature and humidity issues in their existing 76,000 Sq. Ft. warehouse being used to store critical vaccine raw materials. Pfizer retained the services of A&J Consulting for performing an engineering evaluation to upgrade the existing HVAC system for maintaining the required temperature and humidity in the space.

A&J Consulting conducted a feasibility study and recommended several HVAC options to resolve the issues. Based on the selected recommended option, A&J prepared design documents for upgrading the HVAC System and controls to achieve required temperature and humidity conditions in the warehouse.
